SOCCER ENTRY 1v1
STANDARD KIT LEAGUE

Our Robot:

Our robot uses two LEGO motors for movement, allowing it to drive and maneuver precisely. It is equipped with an ultrasonic sensor, as well as an infrared sensor from the company "Hi Technic" for detecting the ball. Furthermore, we use a Pixy2 camera, which recognizes the colors of the goals and helps the robot navigate towards them.

Our Team:

We proudly represent Austria and our school, BG/BRG St. Pölten, competing in the Soccer 1v1 Standard Kit category.

Programming:

We programmed our robot using the LEGO MINDSTORMS Education EV3 software, running directly on the EV3 Brick, which autonomously manages the robot's sensors, motors, and overall behavior.
