

millihertz

Components:

Pixy v2: Smart camera for the rapid recognition of colors and objects.

Arduino Leonardo board: Central microcontroller; it manages sensors and movement logic.

Ultrasonic sensors: They measure the distance to obstacles using sound echoes.

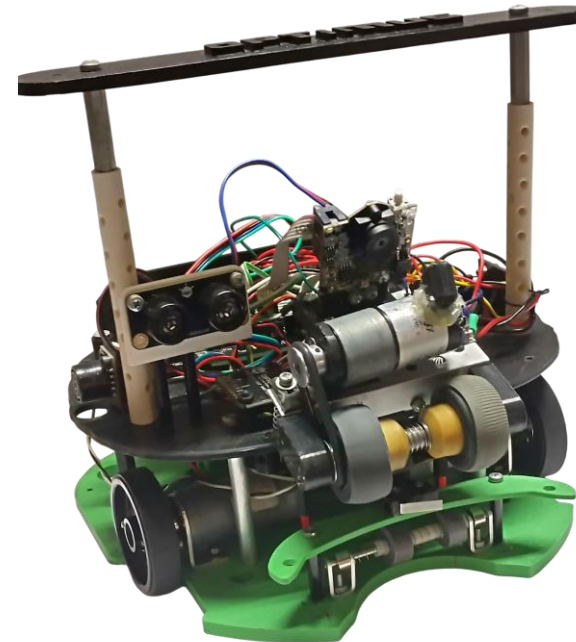

IMU: Sensor (gyroscope + accelerometer) for stability and orientation.

Ball detection board: 16 IR sensors arranged circularly to locate the ball on the field.

Roller: Rotating mechanism to intake and control the ball.

The team:

- Alessandro Campagnani
- Kristian Casalloni
